Assignment 1
Atmo 529 - Castro

Website: The National Operational Hydrologic Remote Sensing Center
Link: <http://www.nohrsc.nws.gov/>

The National Operational Hydrologic Remote Sensing Center provides a continuous snow analysis for the lower 48 United States. The website contains some great maps of snowcover parameters from the Snow Data Assimilation System (SNODAS), which integrates snow data from satellite and airborne platforms, ground stations, and model estimates of snowcover. It also allows access of daily snowcover information going back to October 2003, both in graphical format (in the form of an interactive map), and as binary tables. This data is designed to support for hydrologic modeling and analysis.
